Treatment Location \_\_\_\_\_

Phone Number \_\_\_\_\_

## Treatment Information

·A Meso Mask and Smart Mix are applied to reduce inflammation and redness. Do not apply any cream during the next 12 hours, ONLY the Smart Mix that was given to you after your treatment. Use only warm water to splash on the face, and PAT dry with a clean paper towel.

·Unless otherwise directed by your Aesthetician, the use of cleansers or topical products should be avoided for at least 36 hours post treatment. Antiseptic washes, creams and/or prophylactic antibiotics may be prescribed by your physician.

## After the Skin is Healed

·Makeup may be used when the skin is completely healed (wait 48 hours post procedure). Using makeup on broken skin poses a certain risk of hyperpigmentation as a result of infiltration or makeup into the open tissue, as well as the risk of potential bacterial infection and inflammation in the treatment area.

·Retinoids, AHA and BHA's can be used to soften and superficially resurface the epidermis (skin), but ONLY after the skin has totally recovered from the procedure (this means at least one week post treatment).

·A normal skin care regimen can be resumed once the skin has completely healed (after at least one week).

## Recommended Skin Care Between Needling Sessions

Only use the daily application of Fusion Mesotherapy face cream for the acceleration of regenerative processes and consolidation of procedure results.
